

MEMORANDUM OF UNDERSTANDING  
BETWEEN THE  
UNITED STATES POSTAL SERVICE  
AND THE  
NATIONAL ASSOCIATION OF LETTER CARRIERS,  
AFL-CIO

The U.S. Postal Service and the National Association of Letter Carriers, AFL-CIO, recognize the importance of the work methods that will be used in a delivery point sequence environment. The parties also realize the substantial contribution that letter carriers can make in the development of these work methods. Towards facilitating that involvement, the following principles have been agreed to by the parties at the national level:

1. The following are the approved work methods:
  - o Case residual letters in the same separations with vertically cased flat mail, pull down and carry as one bundle.
  - o Case residual letter mail separately into delivery sequence order, pull down and carry as a composite (third) bundle.
2. As implementation of the delivery point bar coding impacts a delivery unit, local parties will select the most efficient work method possible from the delivery point sequence work methods authorized in number 1 above. If the local parties cannot agree on the most efficient work method, the issue will be presented to the parties at the Headquarters level to determine the most efficient work method.
3. Local parties will also be encouraged to develop efficient new work methods and to share their ideas with the parties at the national level for joint review and evaluation. The purpose of this joint review and evaluation will be to determine the efficiency of the local method. After the review and evaluation of the new work method and if the method proves to be efficient, it will be added to Item 1 above.
4. The parties agree that the work method in place at the delivery unit will be utilized in the day-to-day management of letter carrier routes and in the procedures for inspection, evaluation and adjustment of routes.

5. The parties at the national level will continually review alternative methods in an effort to improve efficiency. Both parties agree that the process of continual joint review of new and more efficient work methods will result in the continued upgrading at the local delivery unit of the most efficient work method.
